PROFILE

Full-stack developer with 3+ years of hands-on experience delivering scalable, user-centric, and high-performance web applications. Skilled in MERN stack, Ruby on Rails, and cloud platforms (AWS, GCP) with a strong background in Agile collaboration, API development, and system optimization. Adept at leading teams, streamlining backend workflows, and building modern, responsive frontends. Passionate about solving business challenges through clean, maintainable code and innovative solutions.

PROFESSIONAL EXPERIENCE

Senior Software Engineer 11/2023 – Present
Savvital Islamabad,Pakistan

- Led the complete redesign and overhaul of the company website using Next.js and Framer Motion, improving responsiveness and user engagement, while integrating Payload CMS to enable scalable blog content management.
- Leading the development of a Learning Management System (LMS) with advanced analytics and interactive features to enhance digital education delivery.
- Built an internal task tracking and management platform using FastAPI and Next.js, enabling employee task assignment and progress tracking while providing managers with dashboards, summaries, and flexible tracking across teams, statuses, priorities, and timelines.
- Developed a cross-platform restaurant application using Flutter, implementing reusable UI components, API integrations, state management, and core restaurant workflows for a production client application.
- Develop responsive client websites and web applications using Astro and Next.js, integrating REST APIs, reusable component architectures, server-side rendering, and performance optimizations.

Software Engineer 03/2022 – 09/2023
Devsinc Islamabad,Pakistan

- Backend developer for a Ruby on Rails project, utilizing PostgreSQL, Sidekiq, and Elasticsearch for efficient functionality and performance
- Led frontend development in a MERN stack app, creating responsive and interactive UIs using React and implementing Redux Toolkit for state management
- Built and deployed full-stack applications with Node.js and MongoDB, leveraging AWS for cloud infrastructure and Redis for backend jobs
- Collaborated closely with QA teams and stakeholders to ensure quality and alignment with business goals

Software Engineering Intern 07/2021 – 09/2021
USEN Pakistan Islamabad,Pakistan

- Developed and deployed a PHP-based project using the WAMP stack (Windows, Apache, MySQL, PHP), strengthening backend development and database management skills.
- Designed and optimized SQL queries and database schemas to improve system efficiency and ensure reliable data handling.
- Built reusable front-end components with HTML, CSS, and JavaScript, integrating them with backend APIs for seamless user interactions.
- Assisted in code reviews and debugging sessions, learning best practices in clean coding and version control (Git).

PROJECTS

Savvital
https://www.savvital.us/

Built a feature-rich web platform combining dynamic content publishing with an intuitive admin panel for streamlined management. Leveraged Next.js for performance, PayloadCMS for flexible content control, and Framer Motion to deliver polished animations, resulting in a responsive, visually engaging, and easily maintainable digital experience.

- Developed a full-featured website with smooth animations, a dynamic blogging system, and a robust admin panel for seamless content management.
- The website was built using Next.js with PayloadCMS for content management and Framer Motion for smooth animations.

SD Designer
https://evinova.com/sdo
AI-native platform used by pharmaceutical clinical development teams to design, cost, and optimise clinical trial protocols, built on a connected CDISC USDM 4.0 data model.
- Worked on the Cost team, owning cost estimation and forecasting, one of the platform's headline capabilities, which Evinova reports at over 97% estimate accuracy.
- Consumed trial datasets produced by the data team and owned them through to the screen: validating and transforming the incoming data, ensuring cost calculations were correct, and building the views that presented cost breakdowns and scenario comparisons to clinical teams.
- Delivered new user-facing features end-to-end across a full-JavaScript stack. Working in a fully Agile process, coordinating closely with the data team across sprints.

Wear Ore
https://wearore.co/
Designed and developed a custom Shopify storefront for wearore.co using Shopify Liquid, delivering a tailored e-commerce experience that supported the business's growth and online presence.

XQuic
https://xquic.com/

Created a hospitality-focused SaaS system in Ruby on Rails, engineered for large-scale codebases and performance. Implemented advanced reporting to uncover hidden revenue leaks in reservations, enabling hotels to significantly lower external platform charges while improving profitability, decision-making, and long-term operational resilience through data-driven insights.

- SaaS platform helping hotels cut costs by reducing commissions paid to booking sites.
- Built entirely in Ruby on Rails with over 200,000 lines of code and integrated analytics for actionable insights.
- Identified discrepancies in hotel bookings, saving clients thousands in commission fees.

Trivia

Designed and developed an interactive gaming platform supporting real-time multiplayer experiences. Leveraged the MERN stack with event-driven architecture to enable fast communication, dynamic team modes, and competitive play. Optimized with Redis and WebSockets, the system delivered seamless responsiveness and engaging features that enhanced user participation and retention.

- Multiplayer quiz application with tournaments, team play, and live voting to boost competitiveness.
- Built on the MERN stack using React, Redux Toolkit, Node.js, Socket.io, and Redis for real-time interactions.

Backdev

Engineered a low-code development platform that empowered users to visually build backend services through a drag-and-drop interface. Implemented with Express.js, the tool streamlined API creation, simplified route management, and reduced development time by making backend architecture more accessible, efficient, and scalable for diverse technical teams.

- Low-code tool enabling developers to create backend systems via a drag-and-drop interface.
- Developed with Express.js, simplifying backend architecture and route visualization.

EDUCATION

Bachelor of Computer Science 09/2018 – 09/2022
National University of Sciences and Technology (NUST) Islamabad,Pakistan
CGPA: 3.49/4.00

INTERESTS

Volunteer: Happy Little Family (HLF) – Childhood Cancer Care Trust |
Hobbies: Tech, Teaching, Photography, Gaming
